## Date:

1. Mars Inc. has two factories that make M\&Ms. From theirTennessee factory, $20.7 \%$ of the $\mathrm{M} \& \mathrm{Ms}$ are blue, $20.5 \%$ are orange, $19.8 \%$ are green, $13.5 \%$ are yellow, $13.1 \%$ are red, and $12.4 \%$ are brown. In a random sample, 97 are blue, 97 are orange, 56 are green, 54 are yellow, 44 are red, and 52 are brown.
a) How many degrees of freedom are there?
$d f=$ $\qquad$ $-1=$ $\qquad$
b) What is the critical value?

Look in the .05 column of the $\chi^{2}$ table in the book or an online $\chi^{2}$ table.
c) Sketch the $\chi^{2}$ curve, label the peak of the curve and the critical value, and shade the critical region.

All $x^{2}$ curves start at $x^{2}=$ $\qquad$ , because squares cannot be negative.

The peak of a $\chi^{2}$ curve is $\mathrm{df}-2$, which in this case is $\chi^{2}=$ $\qquad$ .
$\chi^{2}$ curves are skewed $\qquad$ .

| d) Calc Color | hout using a ca \# Observed (O) | tor test. <br> Proportion Expected | \# Expected (E) | O-E | $(0-E)^{2}$ | $(O-E)^{2} \div E$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Blue | 97 | . 207 | 82.8 | 14.2 | 201.64 | 2.44 |
| Orange | 97 | . 205 | 82.0 |  |  | 2.74 |
| Green | 56 | . 198 | 79.2 | -23.2 | 538.24 |  |
| Yellow | 54 |  |  |  |  |  |
| Red | 44 |  |  |  |  | 1.35 |
| Brown | 52 |  |  |  |  |  |
|  | $\Sigma O=400$ | 1.000 | $\Sigma E=400$ |  | $\chi^{2}=\Sigma$ | _ $=$ |

e) What does the value of zero mean in the last column?

There was $\qquad$ between the expected number of $\qquad$ M\&Ms in the sample and the actual number of
$\qquad$ M\&Ms in the sample, that is, it perfectly supports the $\qquad$ hypothesis.
f) Are the data statistically significant?
$\qquad$ because the calculated value of $\chi^{2}$ is $\qquad$ than the critical value of $\chi^{2}$.
g) State the conclusion, followed by $\chi^{2}(d f)$ and a $p$ value range.

M\&Ms from Scotts Valley Market $\qquad$ follow the Tennessee factory distribution, $\chi^{2}$ ( $\qquad$ $1=$ $\qquad$ $p$ $\qquad$ .05.
h) Which color contributed the most to this conclusion, and which color contributed the least?
$\qquad$ contributed the most, and $\qquad$ contributed the least.
i) What would the conclusion have been if the answer to (d) had been 10.18 ?
$\qquad$
$\qquad$
$\qquad$ $1=$ $\qquad$ , $p$ . 05.
