1. Sixteen college women record their total weight gain in their first semester of college. The six non-vegetarians gained $8.6,6.4,3.0,5.5,8.1$, and 1.4 pounds. The six vegetarians gained $4.4,5.1,-1.4,0.9,3.0$, and 2.4 pounds. The four vegans gained $3.3,0.4,1.1$, and 1.2 pounds.
a) How many degrees of freedom are there?

There are $\qquad$ $-1=$ $\qquad$ degrees of freedom between the groups. There are $\qquad$ $-1=$ $\qquad$ degrees of freedom for the non-vegetarians, $\qquad$ $-1=$ $\qquad$ degrees of freedom
for the vegetarians, and $\qquad$ $-1=$ $\qquad$ degrees of freedom for the vegans, making a total of $\qquad$ $+$ $\qquad$ $+$ $\qquad$ $=$ $\qquad$ degrees of freedom within the groups.
b) What is the critical value?

For $\mathrm{df}_{N}=$ $\qquad$ and $d f_{0}=$ $\qquad$ in the $\alpha=$ $\qquad$ $F$ table, $F_{0}=$ $\qquad$
c) Calculate $S S_{w}$ by hand.

f) Calculate $M S_{B}$ by hand.
$M S_{B}=$ $\qquad$ $=$
g) Calculate $F$ by hand.
$F=\square=$ $\qquad$
h) State the conclusion, followed by $F_{d f, d f}$ and a range for $p$.

Non-vegetarian, vegetarian, and vegan women $\qquad$ during the first semester of college, F $\qquad$ $=$ $\qquad$
$p$ $\qquad$ .05.
i) Find the exact $p$ value by doing a calculator test.

For ANOVAI $\qquad$ ), $p=$ $\qquad$
